Step 3: A installer is downloaded in your machine that you want to add for cyber backup

Step 4: Run that installer file in your machine and then click on the install button

Step 5: Now agent is installing in your machine

**Step 6.1:** Now you just need to register your machine at cloud management portal for that click on **Register the Machine** button

**Step 6.2:** After that you will get the registration Code, you just need to click on Confirm Registration

Device registration X				
Please confirm the device registration				
Registration code	<b></b>			
Register for:	Test_Server	ie.		
Machine name:				
CONFIRM REGISTRATION				

**Step 6.3:** After that you will get this popup just close this window.

Welcome to Cyber Protect Agent for Windows Setup	
	The installation was successful.
	The machine will appear in the web console shortly.
	CLOSE
Open help	

**Step 7:** After registering your machine at autobackup you need to select backup plan according to your requirement.

Devices >> All Devices >> Enable Protection
